

STRENGTHENING THE
ROLE OF PUBLIC-PRIVATE
PARTNERSHIPS
IN CLIMATE CHANGE
ADAPTATION PLANNING

CAROL LUE

This paper focuses on how the planning community can better bridge the business sector and the government in implementing climate change adaptation programs through fostering stronger private-public partnerships. Building trust and facilitating synergic planning are identified as key ingredients to this process. The City of Toronto is highlighted using the Eco Roof Incentive, Toronto Green Standard, and Trees for Toronto programs as examples.
